**BROOKINGS, S.D.** – SDSU Extension is hosting open house agronomy meetings in eight South Dakota locations, to address the current state of farming due to excessive moisture.

These meetings will be come-and-go style, with no formal presentations. Agriculture producers are encouraged to bring their questions and concerns regarding delayed planting, forages, cover crop mixtures, herbicides, insurance, etc. Experts will be on hand to answer questions and provide access to additional resources. SDSU ice cream will be provided and no registration is necessary.

## Dates-Locations-Times

**Armour:** June 10, 2019, Douglas County Courthouse (706 Braddock St.) Community Rm. from 2 to 4 p.m.

## The Clorox® Soak Test

This test is used in the field to determine the percentage of soybean (*Glycine max*) seed damage due to combining or threshing. It is also adaptable to use in the laboratory. The test can be used for beans (*Phaseolus vulgaris*) and other large dicotyledonous seeds which may be injured in combining, threshing, or seed cleaning.

# Using Increased Longevity to Reduce Annual Cow Cost

When evaluating annual cow cost, feed rises to the top of the list. Feed cost is an important area to consider; however, have you evaluated the cost of incorporating replacement heifers into the cowherd?
